Clinical Kitting and Sample Management

In the early 1990's, KCAS found the Clinical Kitting Department in response to shortcomings in the industry. Since then, KCAS and it's newly acquired companies, continue to expand on the flexible and custom Clinical Kitting and Sample Management services offered from Phase I - IV.

Where We Can Help

- Do you need a variety of products? We can custom build kits, provide traditional products for blood collection, offer specialized tubes such as CPT, PaxGene, cfBCT and more.
- Do you need expertise in International shipping? We've shipped to over 800+ sites worldwide and managed biorepositories -20 , -80 and liquid nitrogen.
- Do you need kit customization? We've designed a multitude of highly customized kits and can fit just about any need.
- Do you need site education? We provide training and support through many mediums such as, customized manuals, presentations and personalized training.

Annually support 100+ trials worldwide & over 200+ shipments to clinical sites.

Our Commitment

We meet early on with our sponsors to understand in detail the scope of the project; from budget to timelines. Keeping the lines of communication and building a strong foundation from start to finish is what our clients can expect from KCAS Clinical Kitting and Supply Management services. No project is too big or too small. We are just right for your Clinical Kitting and Supply Management needs.

How We Do It:

- Provide kits & supplies for multi-site trials worldwide.
 - Multiple matrices
 - Same kit or separately as requested
- Provide precise instructions on collecting various sample types.
- Conduct analysis with scientist influence.
- Attend investigator meetings to ensure sample integrity.
- Presentations provide if requested to assist clinical sites on collection, processing and shipping.
- Careful planning on design for easy identification.
- Color code labels by sample type.
- Maintain open lines of communication throughout service.
- Offer central lab services to handle samples that are collected and sent out to other labs for analysis.
